

Polish Genius in Australia

Inventive Minds of Modesty.

Stempinski-- Another Wrigley

Forming a comparatively small colony in Australia the Polish residents here are by no means lost in the melting pot of the great Commonwealth. Having retained the traditions customs and the language of Poland, in spite of the long lapse of years, the Pole endeavours to contribute his share towards the welfare, fame and prosperity of his new adopted country.

Last week there arrived at Sydney Pan François Stempinski, of Melbourne, who claims to have discovered a new process in manufacturing delicious and refreshing chewing gum of lasting taste and sweetness.

Invited to Sydney by anxious wires and luscious offers, Pan F. Stempinski will endeavour to give the map of Australia a new flavour.

Skowronski-- Glass Process.

Another Polander, well known local social worker and director of the Ultra Sign Co., Pan Stanislaw Skowronski, invented and designed a highly original advertising contrivance, patent pending. He is also in possession of the new process in glass embossing as

perhaps he is also in possession of the new process in glass embossing as well as of several ideas in the later stages of development.

Another Pole -- Theatrical revelation.

Yet another Pole, a journalist, accomplished one inventive discovery which is sure to revolutionise the whole of moving pictures industry in the near future.
